The power of science – Physical and Chemical regularities

Project objective:

Producing interest in science, provoking the attention of the smallest to the physical and chemical regularities in everyday life that they unknown.

The power of science is the power that provokes interest in knowledge.

The power of science is that power that grabs the eyes, interest and curiosity of children towards the phenomena in the world and around us. This power motivates them to be explorers and discoverers in their childhood world. And maybe future scientists and researchers!

100%
Great!

Conclusion: The project includes scientific experiments conducted in class and tailored to the early age of children!
