## SHINE SOME LIGHT ON PHYSICS

With this project we will present five different integrative workshops that have a common thread: developing critical thinking while solving problem tasks through the experiments which connect our surrounding and science. The students will be able to understand the laws of physics in an interesting way, through games and the use of simple and available materials. LIGHT - SOUND - OPTICS - FORCE - MAGNETISM

Through the workshop, visitors will have the opportunity to find more creative solutions to prove certain phenomena through the reuse of different raw materials.
